

## Docs Legal Documents solution

Docs is a solution that enables bank employees to fill out automatically generated client legal documents, such as account opening forms, with the capability to add marks such as barcodes, 2d Matrix or alpha-numeric codes. These marks will then be used during the scanning process after the documents have been completed and signed, thus allowing automatic fail proof identification and safe archiving. Generated documents can take part in workflow processes such as four eyes validation or more complex validation scenarios.

## What is it bringing you?

Incorporating this solution in your day-to-day banking activities will not only reduce error entries and ensure optimum data protection but will also increase the productivity of your back-office staff. Docs optimizes your legal document structure in order to minimize the amount of redundant data that the client has to enter.

**The entire range of New Access products and solutions is fully compatible and cross functional with each other. We give your infrastructure the possibility of bridging CRM data, documents, portfolios and reporting systems.**

### Features

- Generate documents based on easy-to-build templates
  - Securely manage legal documents lifecycle
    - Link with existing data feeds
- Automatic capture of documents prior to printing
  - Integrate with workflow services

### Key benefits:

- Easy setup and administration
- Enter client data once (and only once)
- Improves productivity
- Greatly minimizes input errors
- High security level
